Biography

Dr Roy Betts is Head of Microbiology at Campden BRI, an independent international food research organisation based in the UK. He manages a group of 45 food microbiologists, undertaking a range of industry focussed food research and testing projects for a worldwide client base. He originally managed a research team at CampdenBRI and concentrated on the research, development and validation of microbiological test methods. After becoming Head of Department, his interests moved to the assessment of the microbiological quality and safety of foods, advising industry on techniques and procedures to produce and market high quality safe foods. He has published widely in the area and is a member of the ILSI Europe Microbiological Food Safety Task Force, the UK Food and Drink Federation Food Hygiene Sub Committee and the UK Advisory Committee on the Microbiological Safety of Foods as well as British Standards Institute and ISO committees dealing with microbiological test methods.
